

# ABS-Lock I

Detachable anchor for ABS-Lock II sleeve

The principle behind our ABS-Lock I+II fall arrest system is simple: Just one single anchorage eyelet for numerous different anchor locations. Our system is based on 2 components. The ABS-Lock I is a detachable anchor which is simply installed and removed by pressing the button. Once the retainer ball bearings inside the anchorage point have locked into place, the device can withstand loads of 2 or more tons - making this fall protection device the ideal partner for securing windows.

Our ABS-Lock II sleeve matches the anchor - a truly multi-talented solution. For wood, steel and concrete, walls, overhead installation and suspended ceilings: Our ABS-Lock II can be installed virtually anywhere - thanks to our broad range of accessories. And because you can simply remove the anchorage point afterwards, it does not spoil the aesthetic look of your building and never gets in your way.

As our ABS-Lock I anchorage eyelet is easy to carry around with you, it can be used with an endless number of different sleeves. Use our ABS-Lock II-B for installation in concrete or wooden structures. Our ABS-Lock II-ST is ideal for steel surfaces.

## Substructure

Steel Concrete  
Wood

## Application

Facade/ Wall Window  
Overhead

## Certification

EN 795 ANSI

## Force Directions

Lateral and Axial

## Max. no. of users

2 Persons

## Miscellaneous

Abseiling suitable (1 individual) 360° Rotating  
Stainless Steel

- EN 795:2012, B + DIN CEN/TS 16415:2017
- Can be simply removed at the touch of a button
- Locking latch prevents accidental unlocking
- Combine with our ABS-Lock II matching sleeve

**ABS-Lock I TelePole**  
Telescopic rod for inserting and removing an ABS-Lock I anchor
