

ABS-Lock V-B

Unobtrusive anchorage point - designed for hammering into a concrete surface

Our ABS-Lock V-B anchorage device is designed for 1 individual. This fall arrest device, which is equipped with a discreet anchor tab, is unobtrusive to the eye and does not spoil the architectural design of your building. Our compact anchor weighs less than 40g. It is equipped with a drive-in dowel (M10) - making it extremely easy to install in concrete. Simply hammer the dowel into a 80 mm bore hole and tighten up the nut.

This anchorage device is tested to withstand axial and lateral loads. Our ABS-Lock V-B is also easy to install in a ceiling. A countered model is also available for steel structures.

Certification

EN 795

Force Directions

Lateral and Axial

Substructure

Concrete

Max. no. of users

1 Person

Miscellaneous

Stainless Steel
