

## ABS-Lock V-ST

Unobtrusive anchorage point - designed for steel surfaces (countered)

Our ABS-Lock V-ST is either inserted through a load-bearing steel structure and countered on the other side or screwed straight into the subsurface. Its eyelet is designed to provide a safe anchorage point for 1 individual. Protect your workers when they are working near a dangerous edge or high up using this easy-to-use, unobtrusive fall arrest solution.

Your fall arrest kit is not complete without matching fall arrest equipment (PPE). Our range of products offers everything you need - from safety harnesses to a selection of connectors and a choice of different self-retracting lifelines (SRL). Whether you are working in an industrial environment, doing window-cleaning work or busy on a roof: We offer a selection of PPE sets which are geared to the needs of these special applications.
