

ABS Mobile Guard - pitched

Temporary guard rail system - designed for clamping onto a pitched roof

ABS Mobile Guard - pitched is the name of our temporary aluminium guard rail system for pitched and flat roofs. Unique system feature: This guard rail does not require any additional weights. It weighs only 9.4 kg per metre and is simply hooked onto a roof gutter or the edge of your roof. Special posts distribute any ensuing force directly through the facade.

If you would like to reinforce the system (which is needed in the case of a roof pitch of 30° or 60°), then you can screw the system onto the rafters using adjustable hooked brackets. If your roof does not have a parapet or suitable edge, we can supply an optional toe bar.

This guard rail system can also be installed on overhanging roofs (up to 1 m).

Application

Flat Roofs Pitched Roof

Attachment

clamped w/o roof penetration

Miscellaneous

Additional Shipping Costs

- EN 13374 + A1 2019
- Designed for temporary usage
- Also suitable for overhanging roofs ≤ 1 m
- Lightweight and easy to transport
- Can be easily adapted to fit your architecture
