Discover our ABS Mobile Guard Pro (Eaves) guardrail system - your reliable partner for maximum safety on a pitched or flat roof surface. This temporary guardrail system has been tested in accordance with EN 13374 and offers first-class protection that stops you worrying whilst you are working. The high-quality aluminium design guarantees durability and stability - even under demanding conditions.

The innovative way this guardrail system simply clips onto your gutter lets you install it quickly and easily. Any ensuing force is distributed through special facade supports - guaranteeing stability and making our ABS Mobile Guard Pro (Eaves) guardrail system extremely safe to use. Whether you have to work on a pitched or flat roof surface, this guardrail system adapts perfectly to your needs.

Please note that our ABS Mobile Guard Pro (Eaves) guardrail system must protrude at least 1 m beyond the area of work at each side. If this is not possible, then you can add the optionally available "Verge" version of our ABS Mobile Guard Pro guardrail system.

Our "Eaves" model is the perfect addition to our **ABS Mobile Guard Pro (Verge)** system. Together, they provide comprehensive protection on all the critical areas of your roof surface. Make sure to secure both the eaves and the verge of your roof - to protect lives.
