ABS Stepladder

Aluminium Stepladder (60°) for safe access

If you want to ensure that your access route from one flat roof section to another is safe to use in the long term, an ABS Safety Stepladder should be your first choice. Our sturdy aluminium Stepladders are not only extremely stable but also provide reliable side protection. The grated steps of our Stepladder, which always comes with a handrail on both sides, comply with slip resistance rating R 13. This ensures you have a safe footing even if you take a wrong step.

Thanks to its modular design, you can customise our ABS Stepladder according to the structural conditions - providing you with a high degree of flexibility when planning and installing your equipment. Our Stepladder is available in three different sizes up - to 3 metres in height. And if a platform is needed, you have a choice of 3 different platform lengths. And it goes without saying that our grated platforms also comply with slip resistance rating R 13. All we need you to tell us is which height you require and how long the platform needs to be - if you actually need one.

Our ABS Stepladder offers you numerous additional safety features that make your work easier and are not available everywhere, such as handrails on both sides. All our platforms are also fitted with guard rails and toe boards. In addition, all Stepladders over one metre in height are equipped with a no entry barrier. We also add components for fixing your ladder to the floor or wall as needed. Have we forgotten anything? Then contact us - we are sure to find the perfect solution.

- DIN EN ISO 14122-3:2016-10
- Lightweight, durable aluminium design
- Optional platform
- Standard width: 60 cm
- Height: 50, 100, 150, 200, 250, 300 cm
