

## ABS Weight OnTop Double Supporting Tube

Stainless steel supporting tube for our ABS Weight OnTop Double model

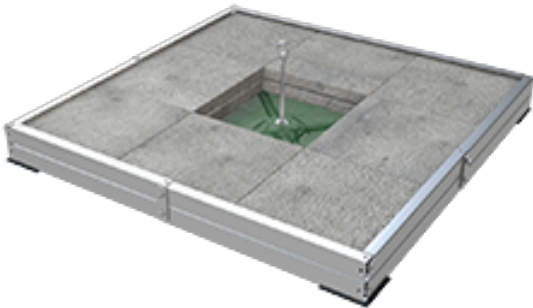

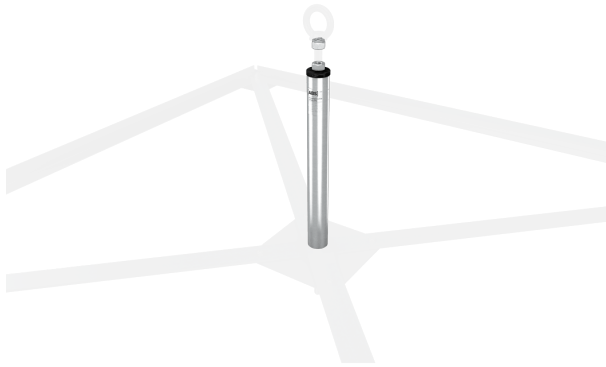

You will need this stainless steel reinforcement - which includes an extra energy absorber - if you want to install an ABS Weight OnTop Double as an end or corner element in a lifeline system. In just a few easy steps, you can upgrade your ABS Weight OnTop Double system to cope with the increased tension exerted on the corners of a lifeline system.

You can also use this anchorage point without a supporting tube as an intermediate post - just like its "baby brother", our ABS Weight OnTop.

- 
- Supporting tube for Ø 16 mm posts
  - Required for usage as a corner or end post in a lifeline system
  - Includes an energy absorber

**ABS Weight OnTop Double**

Flat roof anchorage point for 2 individuals - secured with weights making it completely penetration-free
